BLEED CONTROL KIT - SSBK25US

The SureScan® Bleed Control Kits have everything you need to save lives, FAST.

This kit includes the patented RapidStop® Tourniquet which represents a hemostatic trauma solution with military-grade ruggedness, all age suitability, superior single-handed application and the fastest average occlusion time. A severed brachial, radial, or ulnar artery, presents a limited window of time before the decreasing blood pressure renders the injured unconscious. Shock can set in even sooner. Achieving full occlusion in the shortest time possible is critical. Faster application means faster stabilization, increasing chances of survival. All the contents are packaged in a durable weatherproof plastic box with a carry handle and wall mount bracket.
